

## 263-2300-00: How To Write Fast Numerical Code

Assignment 4: Start project

Check point: Thu March 28 17:00

<http://www.inf.ethz.ch/personal/markusp/teaching/263-2300-ETH-spring13/course.html>

Questions: [fastcode@lists.inf.ethz.ch](mailto:fastcode@lists.inf.ethz.ch)

- This week is allocated for you to start working on your research project. Remember that the project counts for 40% of the overall grade.
- All projects are listed on the website and each one has a project number xx.
- For each project we created an svn directory (**different from your homework svn**) at [https://svn.inf.ethz.ch/svn/pueschel/students/trunk/s13-fastcode/project\\_xx/](https://svn.inf.ethz.ch/svn/pueschel/students/trunk/s13-fastcode/project_xx/)  
Use this directory for your development.
- Every project period has a check point (see above). Before that time you should
  1. Update svn with the latest code.
  2. Go to the list of mile stones at <https://medellin.inf.ethz.ch/courses/263-2300-ETH-spring13/> to report your progress. This week you should at the very least register there, and enter the relevant information in the beginning of list of mile stones. Read through the rest - it structures your approach and contains some suggestions that may be helpful.

In the end it is up to you how you organize your project work but we recommend working regularly on it as time permits and update the list of mile stones as you complete them.
